

## Woven Roll Lining & Brake Block Lead-Times

---

January 7, 2016

Dear Customer,

Scan-Pac is pleased to announce that we have significantly reduced our lead-times on Green Gripper Woven (GGW), Gemini Woven roll lining, and Oilfield Brake Blocks! We are now able to ship woven roll lining orders of 50 feet or less within 1-2 days of the order date. For Oilfield brake blocks we can ship 1 set within 1-2 days and multiple sets within 3-4 days. Please call early in the day if you need same day service.

Scan-Pac invested more than \$250,000 on Capital upgrades to its Industrial and Oilfield looms allowing us to achieve these lead time reductions and maintain our reputation as the highest quality source for your woven friction material needs.

Scan-Pac is now holding stock on all common thicknesses affording us the opportunity to deliver these exceptional lead-times.

Unlike most of our competitors, Scan-Pac's woven materials are manufactured right here in the U.S. at our facility in Magnolia, Texas. Both GGW and Gemini woven are high quality materials that have been approved for use on OEM applications throughout industries and markets. Green Gripper Woven has a long history of dependability and high quality, and Gemini Woven is offered at a lower price point to compete with imports and lower priced competitors. Gemini offers competitive pricing, but it is still manufactured with the same high quality and precision as GGW.

With these lead-time improvements and the highest quality woven materials available in the market, there is no better place to order these materials than Scan-Pac Manufacturing.

For more information on Scan-Pac, please visit our website at [www.scanpac.com](http://www.scanpac.com).
